If you are exposed to COVID-19

You are fully vaccinated 2 weeks after getting your final dose of a COVID-19 vaccine. Fully vaccinated people do not need to quarantine and can continue to go to work, school, and participate in events. We know there is a small chance vaccinated people can get COVID-19 (called a breakthrough case) and pass the virus to other people, so to be very safe we suggest vaccinated people get a COVID-19 test 3 days after they were exposed.

If you are not fully vaccinated, you should quarantine at home if you are exposed to COVID-19. This means you were in close contact with someone who has COVID-19 while that person was infectious. You should not go to work, school, extracurricular activities, religious services, family gatherings, or other activities.

Watch for symptoms and take precautions like wearing a mask until it has been 14 days after your exposure. Isolate and get tested for COVID-19 right away if you get sick or have symptoms of COVID-19.
